Team: **Uniquez**
Project/App name: **OurHouse**

Week: February 10th - 16th 2020
(Names, Student ID):
(Jonathan Lim, 100937925):
Worked on this week:
- Created a view page that connects months and year specified from the user (~2 hours)
- Created buttons that will connect to view amount paid and performance of that specific year and month (~2 hours)
- Touched up on graphs and charts (~1 hours)

Working on next week:
- FInishing up the view page that connects month and year
- Try to work on view amount paid and performance

(Victor Olaitan, 101088982):
Worked on this week:
- Setup Models/link with already created models
- More work on sessions (cloud & local)
- UI of feed

Working on next week:
- Fix Schedule class
- Feed backend (- event generation)

(Robert Wallace, 101070210):
Worked on this week:
- (~3 hours) Created the functionality for creating/joining into a house in the My Homes screen, which includes making a unique house id, emailing the user their house info and id, as well as loading the right house when they want to join the house with their id.
- (~3 hours) Added tasks/fees to the feed when the add button is clicked
- (~2 hours) Fixed up the RecyclerView roommate rotation list

Working on next week:
- Updating Fee/Task objects to inherit from an abstract class ManageItem as well as making them compatible with the database
- Updating all of the manage XML files with consistent styling

(Sebastian Gadzinski, 101083974):
Worked on this week:
- Developing more into the collection of the users, working with the rest of the functional dependencies and adding functions for there needs to the backend to collect data from the cloud(~5 hours)

Working on next week:
- Merging mongoDB stitch and atlas with the application
- Creating functionality within 4.1 and 4.2
